

Healthy smiles = A<sup>+</sup>

Dental Health Educational Programs for schools and day care facilities.

Kids Dental educational and advocacy programs playfully educate children and their parents on healthy eating habits and proper dental home care.

### Kids Dental Educational Programs

Our dental and nutritional health programs reach out to children by creating a dynamic experience dedicated to helping students learn by participating and doing. Our presentations are designed for both an in-class experience as well as a field trip experience where children come to Kids Dental to learn and interact in Grinich Village, our health discovery center.

It is designed to enhance public health learning.

More than a field trip, Grinich Village is a fun filled journey in an environment that encourages co-operative learning. Children interact with exhibits, adults, and each other in creative and imaginative ways.

It is our mission to instill a sense of excitement within children about their dental health and overall well-being.

### Our Educational Programs Include:

- 1) In class presentations or,
- 2) Class field trips to Grinich Village, our health discovery center.

- ✓ Interactive learning games and tools.
- ✓ A Dental Health Educational Co-ordinator with grade specific programs and presentations.
- ✓ Videos geared towards helping children understand what to expect when going to the dentist as well as proper oral hygiene techniques.
- ✓ An activity package for each student, with educational material supporting good dental health and eating habits; an informative parental brochure.

### Our school programs are:

- ✓ Approximately 30-60 minutes in length, however, can be tailored to meet the needs of the teacher.

# Our Grade Specific Programs

## Pre-school, Kindergarten, and Grade 1:

- To develop an understanding of the importance of teeth and their functions
- To become acquainted with the dentist and his or her dental team
- To learn how to care and protect teeth through proper oral hygiene and a healthy diet

## Grades 2-4:

- To develop an understanding of the importance of teeth and their functions.
- To introduce tooth anatomy and structure.
- To introduce children to the cavity causing bacteria in their mouths.
- To emphasize cavity prevention through proper oral health and a healthy diet.

And just for fun...a history lesson on unique dental practices from the past to present.

## Grades 4-6:

- To introduce children to "The Tooth": it's functions, anatomy and the different kinds of teeth in our mouths including primary and permanent teeth
- To learn about the causes of tooth decay and gum disease
- To learn how to care and protect teeth through proper oral hygiene, prevention, and a healthy diet
- To encourage children to avoid habits that are harmful to their teeth.
